

FUNCTIONAL SPECIFICATION

SmartPharma – Wholesale Pharmacy Management System – ZSMARTPHARMA

1. Document Information

Field	Description
Project	SmartPharma – Wholesale Pharmacy Management System
Module	Wholesale Pharmacy Management
Object Type	Custom ABAP Application
Report Name	ZSMARTPHARMA
Transaction Code	ZSP
Version	1.0
Prepared By	Shaik Mahamood Anzar
Technology	SAP ABAP 7.4

2. Objective

The objective of this development is to create a custom SAP ABAP application for managing wholesale pharmacy operations. The application maintains customer and vendor information, records purchases and sales, manages medicine stock with batch and expiry details, provides ALV-based reporting, and supports billing with Smart Form invoice output.

3. Business Requirement

The business requires a single SAP ABAP application through which pharmacy users can maintain master data and perform day-to-day wholesale pharmacy activities. The application provides separate options for Customer, Vendor, Purchase, Sales/Billing, Stock, and Stock Dashboard functions. During billing, the customer's mobile number is checked first so that an existing customer can be reused instead of creating duplicate customer records.

4. Selection Screen

Module	Selection / Function
Main Menu	Customer, Vendor, Purchase, Sales, Stock, Stock Dashboard
Customer	Display, History, Create
Vendor	Display, Create
Purchase	Display, Details, Create
Sales	Display, Details, Billing/Create
Billing	Customer mobile, customer details, medicine/batch/quantity entries, currency
Stock	All Stock, Low Stock, Near Expiry, Expired Stock

5. Tables Used

Table	Description
ZSP_CUSTOMER	Customer master and visit information
ZSP_VENDOR	Vendor master information
ZSP_PURCHASE_HDR	Purchase header information
ZSP_PURCH_ITEM	Purchase item information
ZSP_SALES_HDR	Sales/billing header information
ZSP_SALES_ITEM	Sales/billing item information
ZSP_INV_STOCK	Medicine inventory, batch, price and expiry information
ZST_SP_BILL_ITEM	Smart Form bill item structure

Table	Description
ZTT_SP_BILL_ITEM	Internal table type used by Smart Form

6. Table Relationships

Parent / Source	Relationship	Child / Usage
ZSP_CUSTOMER	Customer ID / Mobile	Sales/Billing customer reference
ZSP_VENDOR	Vendor ID	ZSP_PURCHASE_HDR vendor reference
ZSP_PURCHASE_HDR	Purchase ID	ZSP_PURCH_ITEM purchase reference
ZSP_SALES_HDR	Sales ID	ZSP_SALES_ITEM sales reference
ZSP_INV_STOCK	MATNR + BATCH_NO	Stock quantity, price and expiry
ZSP_SALES_ITEM	MATNR + BATCH_NO	Stock reduction during billing
ZSP_SALES_ITEM	Mapped bill structure	ZST_SP_BILL_ITEM / ZTT_SP_BILL_ITEM

7. Processing Logic

1. User executes transaction ZSP / program ZSMARTPHARMA.
2. The main selection screen provides the application modules.
3. User selects the required module and corresponding operation.
4. The system validates entered master-data, medicine, batch and quantity information.
5. Billing checks the entered customer mobile number against ZSP_CUSTOMER and reuses the existing customer when found.
6. A new customer record is created only when a matching customer is not found.
7. Purchase transactions save purchase header and item information.
8. Sales/billing transactions save sales header and item information and reduce available stock for selected medicine batches.
9. Stock reporting displays inventory information using ALV and provides stock-related views.
10. ALV output is displayed using CL_SALV_TABLE and standard SALV functions.
11. After successful billing, Smart Form ZSF_SMARTPHARMA_BILL is called for invoice preview/output.
12. Billing item data is passed through ZTT_SP_BILL_ITEM using line structure ZST_SP_BILL_ITEM.

8. Output Layout

S.No	Field / Output	Source
1	Customer ID	ZSP_CUSTOMER
2	Customer Name	ZSP_CUSTOMER
3	Mobile	ZSP_CUSTOMER
4	Vendor ID	ZSP_VENDOR
5	Vendor Name	ZSP_VENDOR
6	Purchase ID	ZSP_PURCHASE_HDR
7	Purchase Date	ZSP_PURCHASE_HDR
8	Purchase Item / Medicine	ZSP_PURCH_ITEM
9	Sales/Bill Number	ZSP_SALES_HDR
10	Customer Reference	ZSP_SALES_HDR
11	Medicine / Material	ZSP_SALES_ITEM
12	Batch Number	ZSP_SALES_ITEM / ZSP_INV_STOCK

S.No	Field / Output	Source
13	Quantity	ZSP_SALES_ITEM / ZSP_INV_STOCK
14	Sales Price	ZSP_SALES_ITEM / ZSP_INV_STOCK
15	Total Amount	ZSP_SALES_HDR / ZSP_SALES_ITEM
16	Expiry Date	ZSP_INV_STOCK

9. Validations

- Validate required customer mobile number during billing.
- If a customer already exists for the entered mobile number, reuse the existing customer record instead of creating a duplicate.
- Validate that medicine details are available in stock.
- Validate the selected batch and available quantity before billing.
- Validate optional second and third medicine entries when supplied.
- Calculate item totals and overall bill total before saving the transaction.
- Display an appropriate message when required data is missing or no matching stock/customer data is found.
- If no records are available for an ALV selection, display an appropriate no-data message.

10. Assumptions

- The application is implemented in SAP ABAP 7.4.
- Custom Z tables are used for pharmacy-specific master and transaction data.
- Standard SAP GUI selection screens are used; no separate frontend is required.
- ALV output is provided using CL_SALV_TABLE.
- Standard SALV toolbar functionality is used for ALV operations.
- Medicine stock is identified using material and batch information.
- Billing uses Smart Form ZSF_SMARTPHARMA_BILL for invoice output.
- The application is intended for development/testing and project demonstration.

11. Expected Output

The completed SmartPharma application provides a consolidated SAP ABAP solution for wholesale pharmacy management. Users can maintain customers and vendors, record purchases, perform sales and billing, monitor stock by medicine and batch, identify low or expiry-related stock conditions, view information in ALV format, and generate a billing invoice through Smart Form ZSF_SMARTPHARMA_BILL.
